Experiment 5 : Interacting with the Hadoop Distributed File System (HDFS)

STUDENT NAME: Shweta Negi

UID: 25/SCA/MCAN/032

DATE OF PERFORMANCE: 18/09/2026

1. **AIM/OVERVIEW OF THE PRACTICAL:** To understand the basic commands for interacting with the Hadoop Distributed File System (HDFS).

2. TASK TO BE DONE:

Step 1: Check Hadoop Version
Open the terminal and execute the following command to check the installed Hadoop version.
hadoop version
Step 2: List Files and Directories
Use the following command to display the files and directories present in the HDFS root directory.
hdfs dfs -ls /
Step 3: Create a Directory in HDFS
Create a directory named chirag in HDFS.
hdfs dfs -mkdir /chirag
Step 4: Verify the Directory
Execute the following command to check whether the directory has been created.
hdfs dfs -ls /
Step 5: Create a File in HDFS
Create an empty file named posts.txt in HDFS.
hdfs dfs -touchz /chirag/posts.txt
Step 6: Display the File
List the contents of the chirag directory.
hdfs dfs -ls /chirag
Step 7: Check File Size
Display the size of the file stored in HDFS.
hdfs dfs -du /chirag
Step 8: Remove the File
Delete the file named posts.txt from HDFS.

hdfs dfs -rm /chirag/posts.txt

Step 9: Remove the Directory

After deleting the file, remove the chirag directory.

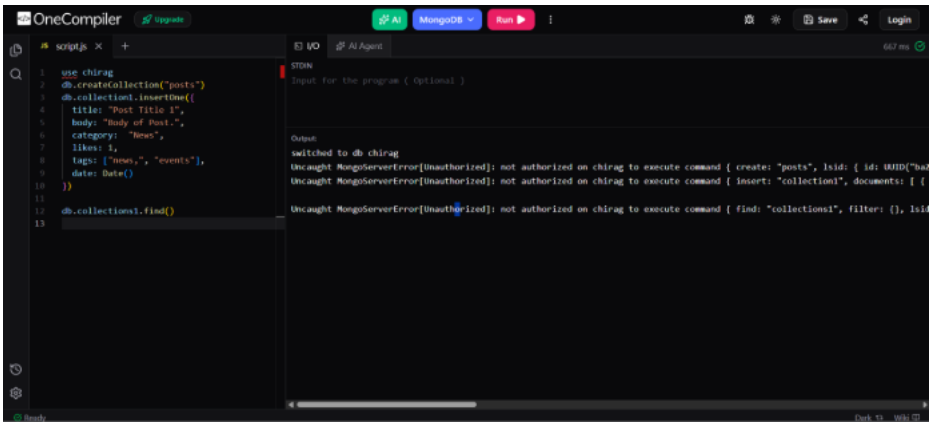

hdfs dfs -rmdir /chirag

Step 10: Verify the Final Result

Execute the following command to verify the final contents of the HDFS root directory.

hdfs dfs -ls /

3. RESULT/OUTPUT/WRITING:

4. **LEARNING OUTCOME (WHAT I HAVE LEARNT):** I have learnt to execute Hadoop file system commands
